Hispanic Mental Health

Raise Awareness

Mental health affects individuals of all races, cultures, ages, genders, religions and income levels. Awareness and outreach are crucial components to addressing disparities in the mental health field. Many minority populations are unaware of resources and services available to them. Latin populations tend to seek treatment from churches, family, and community leaders. Therefore, it is important to provide information and resources.

African-American Mental Health Resources
Numbers Don’t Lie

1. African-American adults are 20% more likely to report serious psychological distress than Caucasian adults.
2. Older Asian-American women have the highest suicide rate of all women who are 65+ years old in the United States.
3. Adults with disabilities are 3 times more likely to commit suicide than peers without disabilities.
4. Gay and bisexual men have higher prevalence of eating and body image disorders than heterosexual peers.
5. Individuals in poverty are more likely to be exposed to complex trauma and less likely to receive quality mental health services.
